

**Chart 1: DCM US Enhanced Composite Trailing Performance December 31, 2023**

**DCM Strategy: U.S. Enhanced**

The DCM U.S. Enhanced composite is comprised of 200-300 equity securities with market capitalization similar to the S&P 500 Index and uses the Decatur Alpha Rank allocation methodology. The strategy has a positive allocation to those firms with higher profitability, valuation and expectations characteristics.

**Portfolio Manager Commentary**

For the quarter, U.S. Enhanced return, net of fees, was 11.16% compared to the S&P 500 of 11.69%. The net of fees performance for the year to date was 25.73% (unaudited), compared to the S&P 500 of 26.29%.

**Performance Analysis**

Our allocation to cash of 1.50% was the highest net allocation compared to the index with zero allocation to cash. We would expect a significant underperformance due to the cash position during period of strong equity returns. However, the use of the Decatur Alpha Rank to allocate the holdings maintained a low tracking error.

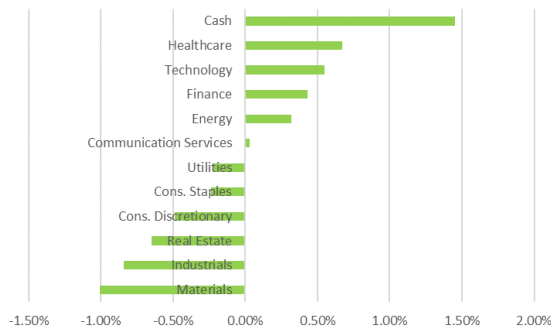

**Factor Analysis**

Chart 3 reflects cumulative weights for our three major factor groups of valuation, profitability, and expectations. The analysis indicates that expectations impact on returns remain consistent. The relationship of valuation and profitability changed during the quarter. We were coming off of a negative quarter for the markets and both profitability and valuation had similar impacts on stock performance through October. In November and December, those stocks that had strong profitability exposures surged in performance. These stocks were led by the mega cap technology stocks.

**Outlook**

During the quarter, the strategy worked well given the volatility to the upside. The last two months witnessed a significant surge of the mega cap technology stocks. The structure of the Decatur Alpha Rank with the tilt to quality, reasonable valuation and improving expectations resulted in flat performance for the year.
